

Here is my code

```
1 f := proc(x)
2   if x <= 2 then
3     print(x);
4     print(x^2)
5   end if;
6   print(-x);
7   x^3
8 end proc;
```

How does it look?

```
f := proc(x)
  if x <= 2 then
    print(x);
    print(x^2)
  end if;
  print(-x);
  x^3
end proc;
```

Note I cropped out the numbers.
