

This is the "stage tree".. It start in node named O, and contains some value R (real number). After node x, there is a terminal leaf [with name x1 and value f(R)] and another "leaf" after x2 after which O is "repeated". After node y, there is a terminal leaf [y1] with value g(R) and another leaf y2 after which if follows again the stage tree that starts in O. The same in z.
